

How can you declare the array (all type) in PHP?
Explain with example Covert a JSON string to
array.

1. Indexed Array - An array with numeric keys:

```
$indexed_array = array("apple", "banana", "cherry");
```

2. Associative Array - An array with named keys:

```
$associative_array = array("name" => "John", "age" => 30, "city" => "New York");
```

3. Multidimensional Array - An array containing one or more arrays:

```
$multidimensional_array = array( array("name" => "John",  
"age" => 30), array("name" => "Jane", "age" => 25) );
```

4. Mixed Type Array - An array containing elements of different types:

```
$mixed_array = array("apple", 10, true, array("a", "b", "c"));
```
