

Q.8 In how many ways can a CSS be integrated as a web page?

CSS (Cascading Style Sheets) can be integrated into a web page in three main ways-

- **Inline CSS:** You can include CSS directly within HTML tags using the style attribute. For example:

```
<p style="color: blue; font-size: 16px;">This is a paragraph with inline CSS.</p>
```

- **Internal CSS:** CSS can be placed within the <style> element in the <head> section of an HTML document. This style will apply to all elements on that page. For example:

```
<head> <style> p { color: blue; font-size: 16px; } </style> </head>
```

- **External CSS:** You can link an external CSS file to your HTML document using the <link> element. This method allows you to apply the same styles to multiple web pages. For example:

```
<head> <link rel="stylesheet" type="text/css" href="styles.css"> </head>
```
